Closing COVID-19 Equity Gaps Among Latinx Populations in North Carolina

Undergraduates: Afreen Ashraf1, Nikhil Chaudhry1, Ethan Ho1, Amy Labrador1, Etan Zeller Maclean1, Caroline Palmer1, Laura Pomé1, Niqua Pope1, Anil Prasad1, Kristen Ringsby1; Graduates: Priya Alagesan2, Matthew Curtis3, Farrah Madanay3, Adoabi Onunkwo4; Team Leaders: Andrew Flynn2, Gabryel Garcia-Sampson2, Viviana Martinez-Bianchi2, Gabriela Plasencia2, Andrea Thoumi5

1Duke University Trinity College of Arts and Sciences, 2Duke University School of Medicine, 3Sanford School of Public Policy, 4Fuqua School of Business, 5Duke-Margolis Center for Health Policy

Where we started

- Latinx communities represented 75% of positive COVID-19 cases in Durham County in early 2020, a rate 5 times greater than the total share of the Latinx population.
- Hispanic/Latinx communities have experienced housing, job, and food insecurity, as well as inequitable vaccine uptake as a result of the pandemic.

Our goals: Identify the role of LATIN-19 in Durham and the community-identified barriers and solutions related to COVID-19 testing/vaccination in Latinx communities.

What we found

Social Network Mapping

Key takeaways

- LATIN-19 plays a central role in connecting community partners and government structures in Durham, although there is still room for inter-organization communication.
- COVID-19 policies have temporarily addressed some of the barriers identified by LATIN-19 members; however, systemic gaps to achieving equitable health outcomes for Latinx populations remain.

Next steps

- Community Engagement Team: Expand network analysis to include budget, funding source, and scope of impact.
- Policy Team: Conduct focus groups with Latinx stakeholders and submit research article to academic journal.
